Example: If you have four 100W solar panels wired in series and each panel outputs 5A at 20V, your array would output 5A at 80V (4 panels x 20V = 80V). That 80V output is in full sun. At times of day when less sun is hitting your panels (early morning, late afternoon) or when there are clouds in the sky, the system output voltage will be ...
