

California renewable energy policy analyst

California's total energy consumption is second-highest in the nation but the state's per capita energy consumption is the fourth-lowest, due in part to its mild climate and its energy efficiency programs. [2] The percentage of renewable energy in California is perhaps made more notable by the particularly high population of the state, states with similar or higher percentages of ...

Developing Energy Policy. Sound policy development requires thoughtful and thorough analysis. The IEPR includes assessments and analyses of California's energy industry, supply, production, transportation, delivery and distribution, demand, and prices. It also includes forecasts of electricity and natural gas demand for 10-year periods.

The latest data from the California Energy Commission shows that in 2021, 59% of the state's energy came from renewable and zero-carbon resources. But to fully meet our goals, it will take investment from both the public and private sectors, and modernizing our rules to ensure we can build the clean energy projects we need to power our state.
