Does Spyder Rs have a steering problem?

I've had my Spyder RS for almost 2 years now and never had a problem with the steering, (other than the steering quits every now and then) it's always been predictable and easy to steer even in bad weather or in strong winds. However, if you happen to have a RT or RTS you might have a common problem where the bike steering is over-sensitive.

Is power steering dangerous?

It's to the point that it can be dangerous, especially on wet roads or when making an unexpected move to avoid a car or object in the road. Normally when you make a lane change or corner around a turn, it takes a fair amount of pressure on the steering before the power steering unit begins to assist.

So it's not likely he will see any of the answers.
