Is PGE converting a coal mine into a solar field?

Owned by Poland's second-largest coal power provider, PGE, the company is starting to take small steps to converting part of the plant and its surrounding mine lands into solar fields.

Can a abandoned mine be converted to a solar power farm?

If successful, the project will be the first to convert an abandoned mine to a solar power farm under the federal, state and local government Abandoned Mine Land Pilot Program (AML), the aim of which is to reclaim mine lands and boost economies throughout Appalachia.

Where are photovoltaic systems used?

Photovoltaic (PV) systems have been applied at many operating mines such as the Goldstrike mine in USA, Chuquicamata mine in Chile, Weipa mine, DeGrussa mine in Australia, Thaba mine in South Africa, and the Rosebel mine in Suriname.

Is Germany a leader in coal to solar conversions?

In part two of this series, we'll look at Germany, far and away the leader in coal to solar conversions, where developers recently broke ground on a 650 MW solar array being constructed on the grounds of a former lignite mine.

Will Norway install a 100 MW solar power plant?

Going forward, with the support of various European development banks, the nation plans to install an additional 100 MW of solar power capacity at the location -- replacing the Oslomej coal-fired thermal power plant adjacent to the mine.

Can solar Voltaics re-vitalize post-mined lands?

One method gaining traction to help re-vitalize these scarred landscapes is to combine the installation of solar voltaic systems with certain agricultural practices. Installing such agro-photovoltaics systems on post-mined lands is gaining traction in Poland, Germany and the United Kingdom.
