

Company creating star for solar power

Could space solar power plants boost satellite energy?

Startup Star Catcher is harnessing space solar power plants to boost satellite energy. The company's photovoltaic power node satellites beam energy directly to other satellites in orbit. The approach may be more practical than plans to beam solar energy to Earth from space.

Can space-based solar power be a sci-fi dream?

Power nodes (top) beam energy ranging from hundreds of watts to tens of kilowatts to client spacecraft solar arrays (bottom). (Image credit: Star Catcher Industries) Space-based solar power may not remain a mere sci-fi dream for much longer.

Can space-based solar power beam solar energy to other satellites?

The company's photovoltaic power node satellites beam energy directly to other satellites in orbit. The approach may be more practical than plans to beam solar energy to Earth from space. Discover how space-based solar power is transforming satellite operations.

Who owns made in space?

The 11-person company was founded earlier this year by longtime space entrepreneurs Andrew Rush and Michael Snyder, who held leadership roles at in-space manufacturing company Made in Space, along with investor Bryan Lyandvert.

Does star catcher have a power grid?

"Power infrastructure is the foundational building block of civilization and industry; our goal is to expand that foundation into LEO and beyond with our in-space power grid and service," Andrew Rush, Star Catcher's co-founder, president and CEO, said in the same statement.

Could space solar be profitable?

"Indeed, the concepts detailed so far all seem to stand on shaky technical ground," wrote Henri Barde, a veteran of the European Space Agency, in IEEE Spectrum in May. But there may be more practical possibilities that are smaller and more limited in scope, and perhaps profitable with existing technology, space solar advocates say.

The solar panels that you see on power stations and satellites are also called photovoltaic (PV) panels, or photovoltaic cells, which as the name implies (photo meaning "light" and voltaic meaning "electricity"), convert sunlight directly into electricity. A module is a group of panels connected electrically and packaged into a frame (more commonly known as a solar ...
