Do solar panels work on cloudy days?

Solar panels are less efficient on cloudy days, but they still produce electricity. Depending on how thick the cloud cover is, a solar panel might only produce 10-25% of its normal output on a cloudy day. How do solar panels work when there is no sun? Solar panels need at least a little sunlight to work, but it doesn't have to be direct sunlight.

Do solar panels generate more electricity if it's cloudy?

Solar panels are most efficient in direct sunlight and will generate less electricity during cloudy conditions. If you live in an area with a lot of overcast days, your solar panels likely won't be performing at their best on a day-to-day basis. "Even on a very cloudy or rainy day, you'll get some electricity," Fenton said.
