At its core, a battery active balancer is an advanced electronic system engineered to manage and regulate individual cells within a battery pack. Its primary function is to ensure that each cell maintains a balanced charge, preventing overcharging or over-discharging that can lead to reduced capacity and a shortened lifespan. By achieving ...

Passive and active cell balancing are two battery balancing methods used to address this issue based on the battery"s state of charge (SOC). To illustrate this, let"s take the example of a battery pack with four cells connected in series, namely Cell 1, Cell 2, Cell 3, and Cell 4. Before balancing, the SOC level of cells L1,L2,L3, and L4 ...
