Electrical energy is the energy derived from electric potential energy or kinetic energy of the charged particles. In general, it is referred to as the energy that has been converted from electric potential energy. We can define electrical energy as the energy generated by the movement of electrons from one point to another.

We formulate solutions for a variety of markets including aerospace, defense, automotive, marine, and industrial traction. Our focus includes the design, modeling, testing, and manufacturing of mechanical, electrical, thermal, controls and protection systems required for critical applications.
