How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

What is the difference between photovoltaic and solar thermal panels?

While photovoltaic panels are a type of solar panel, solar panels can also include solar thermal panels, which generate power using the heat from the sun as opposed to light. PV systems convert energy using cells with semiconductors, while solar thermal panels utilise tubes filled with a liquid (often glycol) with antifreeze to capture heat.

Why should you install solar panels?

Installing solar panels lets you use free, renewable, low carbon electricity. You can sell surplus electricity to the grid or store it for later use. According to low-carbon certification organisation MCS, there were more than 183,000 solar panel installations across the UK in 2023.

How does a solar panel installation work?

The installers start by setting up mounts, ensuring that the solar panel remains securely fastened to the roof and protects it from potential damage in bad weather. This is done by lifting some roof tiles in order to fix anchor points to the rafters. To these roof anchor points are attached the solar panel mounting system.

How does a solar photovoltaic system convert solar energy into electricity?

A solar photovoltaic system converts solar energy into electricity with the use of solar cells that utilise semiconductors. There are multiple types of solar photovoltaic systems depending on their material. How do photovoltaic panels collect energy from the sun?

How many solar panels are installed a week in the UK?

A step-by-step explanation of the simple solar panel installation process. More and more households in the UK are turning towards solar panels for their energy production. Over 3,000 installations are being carried out each week according to trade association Solar Energy UK.
