

# Fengjun 5 generator pulley disassembly

Can a generator pull cord be replaced?

A generator pull cord might malfunction due to a frayed cord, a seized piston, a damaged engine, or a hydro-locked engine. When this happens, you might think it's time to replace the entire generator, but the good news is that a generator pull cord replacement is a relatively easy fix that you can do yourself.

How do you pull a generator cord?

Once the rope is wound around the engine head, grasp it firmly with your hand. Give the rope a firm pull to initiate the starting process. Repeat the pulling process as needed until the generator engine starts. You will also learn emergency DIY repair steps. With this guide, you will be able to handle any generator pull cord challenges.

How do you untie a Polly generator?

Remove the starter assembly from the generator, and don't dismantle any other part. Just rotate the spring anti-clockwise as much as you can and adjust the holes of Polly and assembly cover straight to each other. Now you must untie the rope from the inside it is straightforward.

How do you remove a recoil starter from a generator?

Turn it upside down and drain the liquid from it. Pull the recoil starter while the spark plug is removed (keep yourself away from the spark plug hole). Switch off the generator. Put the spark plug back. Start the generator by using a pull cord. This may produce some smoke but that is normal and will clear the back on.

How do you assemble a Polly generator?

Just rotate the spring anti-clockwise as much as you can and adjust the holes of Polly and assembly cover straight to each other. Now you must untie the rope from the inside it is straightforward. After that insert the new rope from the cover to Polly from the straight hole and tie it. Place the starter assembly back on the generator as it was.

How do you change a generator rope?

Here are the steps you can follow to change a generator rope: **Materials and Tools Needed:** Remove the Old Rope Locate the starter assembly cover on your generator. This is typically on the side of the engine and held in place by a few screws. Use the screwdriver to remove the screws and take off the cover.
