Solar system creator. With this solar system creator you can easily generate a random solar system, complete with basic information on each planet, or choose to create your own, and add your own descriptions for each planet. There are two parts to this tool. The first, seen directly below, is the randomizing version.

Panning: Pan the scene (offsetting the planet from the center, similar to turning your head away from the object of focus) by holding down Ctrl while left-clicking and dragging with the mouse. Zooming: Zoom either with the scroll-wheel or by right-clicking and dragging the mouse up or down. PlanetMaker Gallery.

Your fantasy world can exist inside a system with multiple stars of varying ages and sizes. ... consideration when developing your own star maps for your fantasy world is the number of planets that exist in your solar system, the location of those ...

"Lava Falls on Mercury", cover of If magazine, June 1954. Fictional depictions of Mercury, the innermost planet of the Solar System, have gone through three distinct phases for much was known about the planet, it received scant attention. Later, when it was incorrectly believed that it was tidally locked with the Sun creating a permanent dayside and nightside, stories mainly ...

The 9 Planets in Our Solar System. Mercury. The smallest and fastest planet, Mercury is the closest planet to the Sun and whips around it every 88 Earth days. ... The Sun is the heart of our solar system and its gravity is what keeps every planet and particle in orbit. This yellow dwarf star is just one of billions like it across the Milky Way ...

Introduction. The planetary system we call home is located in an outer spiral arm of the Milky Way galaxy. Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as Pluto; dozens of moons; and millions of asteroids, comets, and meteoroids.

The primary reason for moving this page to Fictional planets of Sol is the logical inconsistency of having an article on fictional planets (excluding planets of Sol) and an article on only Trans-Neptunian planets, but not on other fictional planets. It is somewhat like having an article on Fictional Invertebrate and an Article on Fictional warm ...

Picture successful fiction as a kind of solar system: around a central star which is the theme or governing idea

# Fictional planets of the solar system

of a piece of work orbit planets which represent the images, characters, objects and events in a story. Remove the governing idea, and everything else in the story flies off into the void; remove the planets and you have an idea, floating in space but without life or motion. ...

Planet A, planet D, planet B, planet C, planet E. ... (left) and the heliocentric model of the solar system (right) sort the following phases of Venus by the model or models ...

Let's start with Mercury. It's the smallest planet in our solar system and is really close to the sun, so it's super hot! But on a fictional version of Mercury, people might live in underground cities to stay away from the scorching heat. Next up is Venus. It's the hottest planet in our solar system because it has really thick clouds that trap ...

Planets outside of the Solar System have appeared in fiction since at least the 1850s, long before the first real ones were discovered in the 1990s. Most of these fictional planets do not differ significantly from the Earth, and serve only as settings for the narrative. The majority host native lifeforms, sometimes with humans integrated into the ecosystems.

Consideration of the planet's position in its solar system, the type of star it orbits, and its geological history all contribute to its design. Beyond physical features, fictional planets can harbor societies with cultures, factions, and histories that ...

Frank Herbert's novel, and its many movie adaptations, Dune is about intergalactic rulers and a high-value trade built around the spice of Arrakis is deeply thought-provoking and explores interplanetary relations and the ...

The world of science fiction cinema is a rich one, and that includes the dazzling variety of settings for these feature films. Unlike most other genres of cinema, science fiction can be set practically anywhere, including fictional ...

Let's look at the mean temperature of the Sun, and the planets in our solar system. The mean temperature is the average temperature over the surface of the rocky planets: Mercury, Venus, Earth, and Mars. Dwarf planet Pluto also has a solid surface. But since the gas giants don't have a surface, the mean is the average temperature at what ...

Joss Whedon's science fiction show Firefly is famously set in a solar system that contains hundreds of habitable planets and moons, in the same arrangement as Battlestar Galactica: several stars ...

Note how the planet functions within a larger system. You should also try to get a macro sense of the planet, where you consider if and how the planet exists within a larger system of planets. Maybe the planet is light

# Fictional planets of the solar system

years away from the nearest planet or perhaps it is under the domain of a larger planet in the solar system.

Module description \*\* It may take 2-10 seconds for the website to load after you hit Generate. Sorry for the inconvenience. This is the tool to create planets and solar systems for role playing games set in Science Fiction.
