What are bifacial solar modules?

support bifacial modules. Bifacial modules produce solar power from both sides of the module. Whereas traditional opaque-backsheet panels (monofacial modules) are only designed to convert solar irradiance from one side of the module into DC power, bifacial modules are manufactured with clear plates on both the front and backside

How to install solar modules on a roof?

When installing solar modules on a roof always leave a safe working area between the edge of the roof and the external edge of the solar array. In case of residential installations on the ground, modules shall be installed following local regulations, e.g. using fence. Position the modules to minimize the chances of shading at any time of the day.

Are single axis trackers adapting to bifacial module technology?

single axis trackers in locations with relatively light climatic loads. Thurston, Charles W. "The week read: Tracker market is adapting to bifacial module technology." PV Magazine 17 F

Which angle should a solar module be installed at?

Solar module is recommended to be installed at an optimized tilt angle to maximize the energy output. It is roughly equal to the latitude of the project site as a rule of thumb, facing to equator. But always design based on local situations to find out the optimum one.

How do I mount a PV module to a substructure?

MOUNTING INSTRUCTIONS PV modules can be mounted to the substructure using either corrosion-proof M8 bolts placed through the mounting holes on the rear of the module or specially designed module clamps. A clearance of at least 115mm (recommended) is provided between modules frame and the surface of the wall or roof.

Does portrait mounting configuration affect bifacial solar module degradation rate?

phenomenon to identify the rate of accelerated degradation due to backside irradiance mismatch. Until it is confirmed that the 1-Up portrait mounting configuration does not have a significant impact on bifacial module degradation rate, the recommended mounting configuration for bifacial solar module
