

Community and distributed solar assets are some of the most cost-effective, fastest to market forms of energy generation providing grid stabilization. 38 Degrees North has proven itself as a ...

By holistically investing in digital tools for grid stabilization alongside physical assets, the industry can avoid instability and blackouts, ensuring a sustainable future powered reliably by clean ...

WEG has announced the signing of contracts with Alupar for the supply of a transmission grid stabilization system for Chile. The scope includes a solution with synchronous condensers, ...

WEG has signed contracts to deliver a large-scale grid stabilization system in northern Chile, as part of a project led by Brazilian transmission company Alupar. The deal includes the supply of ...

The grid needs it to maintain voltage reliability and stability during faults such as lightning strikes or equipment failures. Grid stability services are now in high demand as a response to the onslaught of renewable capacity additions (585 ...

Parallel connected synchronous condensers are mainly used for providing short-circuit power and inertia. They also help to stabilize the network through voltage recovery during faults. This becomes increasingly important ...
