

Home power backup generator

What is a backup generator?

Backup generators, as their name suggests, provide backup energy to your home appliances and devices in case of a power outage.

Do you need a backup power generator?

Proper home maintenance is all about planning and preparation. Given the uptick in extreme weather, that may mean investing in a backup power generator to keep your home running in the event of disaster or an extended power outage.

Can a backup generator be used as a primary power source?

The backup generator is designed as a backup to utility power only and should not be used as a primary power source. Answer a few questions so we can connect you with local dealers who will provide custom quotes. Equipping your home with permanent backup power requires a solution as unique as your home and the way you live in it.

How does a backup power generator work?

Backup power generators provide electricity to the home with the use of two main components: a gas- or battery-powered engine that turns an on-board alternator to generate alternating current (AC) electrical power.

Are backup generators permanent?

Unlike standby generators, which are permanently installed and automatically detect a power outage and supply power when needed, backup generators are not permanent installations and are only meant to provide temporary power in instances when power fails.

Who installs a Generac home backup generator?

Your Generac generator will be installed, serviced and supported by one of 10,000 Authorized Generac Dealers local to your area. Home battery backup systems, like the Tesla Powerwall or the LGES 10H and 16H Prime, store energy, which you can use to power your house during an outage. Batteries get that electricity from your ...

Many standby generator options in the \$2,000 to \$7,000 range can power a standard American home. But the average generator cost, including installation, is \$9,000. By comparison, a 10 kilowatt-hour (kWh) home backup battery costs about \$8,000 after incentives. If you want whole-home power, you'll probably need more storage than that, though.

In contrast, larger, whole-home generators may provide enough backup power to run water heaters, HVAC systems, or large appliances. While small generators offering 5,000 to 7,000 watts may be suitable for a small home, larger houses will likely require 20,000-plus watts to keep things up and running.
