

Household solar power installation

Should I install solar panels for my home?

Install some solar panels for your home to give you energy security and to save on energy bills. Speak to an expert today.

How are solar panels installed?

Tiles are lifted so that the installers have access to rafters in the roof. Roof hooks are then inserted onto the rafters before the tiles are placed back, leaving the hooks protruding from the roof tiles. Solar panels are installed onto the mounts. Rails are then secured across the roof hooks so that the panels can lay onto them and be fitted.

What is a solar panel used in a home?

used in a home. Here are some quick definitions to help you. Solar photovoltaic(PV) systems are made up of several panels. Each panel has many cell made from layers of semi-conducting material, usually silicon. When light shines on material, it creates a flow of electricity. Solar panels don't need direct sunlight and can work on cloudy days.

How many solar panels do you need?

Solar panel systems tend to be made up of between six and 12 panels, with each panel generating around 400 to 450W of energy in strong sunlight. You can use our online assessment tool, Go Renewable, to find out what renewable technologies are suitable for your home. The average solar panel system is around 3.5 kilowatt peak (kWp).

Can you install solar panels on a flat roof?

The DNO is the company responsible for bringing electricity to your home. Usually, your installer will register the device for you. Yes, it's okay to install panels on flat roofs. Solar panels work best when angled towards the sun, so panels on flat roofs are normally tilted up to help maximise energy production.

How do you install solar panels on a roof?

Rail and Panel Installation The cheapest and most practical way to install solar panels is with a combination of rails and brackets. A secure hook is fastened to the rafters underneath your roof tiles and the rails are attached to these exposed hooks across the length of the solar array.
