

How much does pge pay for excess solar power

How does PG&E pay for solar energy?

You're paid for your solar energy at close to the same rate as you pay for grid energy. When you use more energy than you generate during a month (called a "billing cycle"), your PG&E meter tracks how much you used from the grid. When you generate more energy than you use during a month, your meter tracks how much you sent to the grid.

Does PG&E pay for surplus energy?

PG&E automatically supplies additional energy to you, as needed. Surplus energy is returned to the energy grid when your system creates more energy than your business can use. We pay you fair market value for any balance of surplus energy that you have at the end of your 12-month billing cycle. How is surplus energy measured?

How much does PGE and SDGE charge per kWh?

PGE and SDGE send you a check for the power at wholesale rates, which is about .3 per kWh. This is incredibly low considering how much they charge you at peak hours (.40+ per kWh). Never oversize your solar unless you plan to increase your usage. You may be able to upsize your solar system, but you can never downsize it.

Does PG&E use TOU rates?

Because PG&E's net metering program uses TOU rates, solar homeowners won't always get the maximum value out of their solar electricity - grid electricity during the early to mid-afternoon hours will cost less, so the solar electricity sent back to the grid during those times will receive a slightly lower net metering credit.

Do PG&E Solar customers have to be on a tou plan?

Some rate plans, like E-TOU-A have tiers and TOU, some have only tiers, some only TOU. Because there has been significant overlap between when the sun is up and peak hours, many solar customers have selected a TOU plan. And as of January 2017 all PG&E solar customers must be on a TOU plan.

What is the PG&E minimum Bill?

The minimum bill is how PG&E has charged solar customers for using their wires and infrastructure. The minimum bill means all solar customers pay up to about \$10/month for "transmission and distribution" fees, meaning substations and transformers and high-voltage pylons, the wires, the "line losses," the labor and maintenance and overhead.

The short answer is--yes, many utility companies do pay for excess solar energy. However, the details vary depending on where you live and which utility company serves your area. How much you can earn by selling ...
