purlins which are in turn supported on existing building roof purlins. Roof top solar panel installation adds some dead load due to weight of panels and mounting systems. Once the size of the solar panel is fixed, the existing structure must be evaluated for added solar panel

How do you install a solar PV system on a roof?

Roof anchors have staggered fixing so work must be done (widen or fit noggins) before installing PV onto such narrow timbers. On-roof is the most common type of way when retro-fitting a solar pv system to your home, and there are many different manufactures of mounting systems but thankfully the correct way of installing them is the same.

This means that solar PV panels generate electrical energy for the entire time they are exposed to natural light. This means the panels and associated electrical equipment feeding power to the building remain "live" at all times.

Should a purlin be rigidly connected to a torque tube?

Purlin should be rigidly connected to the torque tube such that the torque tube can achieve rigid rotation of the Purlins and eventually the panels. We observed that the connection was badly articulated and has resulted in tearing and enlargement of the purlin hole, thus resulting in a "wobble" of the purlin on the tube.
