

How to adjust the photovoltaic inverter voltage when it is high

Can a PV inverter be used as a reactive power generator?

Using the inverter as a reactive power generator by operating it as a volt-ampere reactive (VAR) compensator is a potential way of solving the above issue of voltage sag. The rapid increase in using PV inverters can be used to regulate the grid voltage and it will reduce the extra cost of installing capacitor banks.

How does a PV inverter work?

One method used for this purpose is limiting the export power: The inverter dynamically adjusts the PV power production in order to ensure that export power to the grid does not exceed a preconfigured limit. To enable this functionality, an energy meter that measures export or consumption must be installed at the site.

What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

How does a reactive power inverter work?

The inverter maintains its active power as zero to feed pure reactive power to the grid efficiently. Output waveforms of the active and reactive powers of the system are shown in Fig. 6. The (a) reactive and (b) active powers at the PCC--Case 1. Fig. 6a shows the behaviour of the amount of reactive power in the system.

What is P(V) - power voltage?

P(V) - Power Voltage: This is used when voltage-based power reduction is required. This defines a linear graph set by six points (available from inverter CPU version 3.1808). The inverter de-rates power according to the defined graph, until the voltage reaches the trip value and the inverter disconnects.

What should I do if my solar inverter is over 258V?

We recommend speaking to your solar installer or an electrician to check that your inverter settings comply with the mandatory settings, not the factory settings. If you have concerns due to your inverter recording voltage above 258V or your safety is at risk, contact us and one of our crews will investigate the issue as soon as possible.
