

How to connect the main string of photovoltaic panels

What is a solar panel string?

The "solar panel string" is the most basic and important concept in solar panel wiring. This is simply several PV modules wired in series or parallel. Solar panels feature positive and negative terminals. Wiring solar panels in series means wiring the positive terminal of a module to the negative of the following, and so on for the whole string.

How do you string solar panels in series?

Stringing solar panels in series involves connecting each panel to the next in a line (as illustrated in the left side of the diagram above). Just like a typical battery you may be familiar with, solar panels have positive and negative terminals.

How do you connect solar panels together?

Connecting PV modules in series and parallel are the two basic options, but you can also combine series and parallel wiring to create a hybrid solar panel array. Some solar panels have microinverters built-in, which impacts how you connect the modules together and to your balance of system. What Are They?

How are solar panels wired?

There are multiple ways to approach solar panel wiring. One of the key differences to understand is stringing solar panels in series versus stringing solar panels in parallel. These different stringing configurations have different effects on the electrical current and voltage in the circuit.

How do you wire solar panels in series?

Wiring solar panels in series involves connecting each panel to the next in a line (as illustrated in the diagram above). Just like a typical battery that you may be familiar with, solar panels have positive and negative terminals.

What is a string inverter for solar panels?

In the solar industry, this is typically referred to as "stringing" and each series of panels connected together is referred to as a string. In this article, we'll be focusing on string inverter (as opposed to microinverters). Each string inverter has a range of voltages at which it can operate. What wiring is needed for solar panels?
