How can kids learn about solar energy?

Engaging children in hands-on activities can help them better understand solar energy. For elementary school-aged kids, activities like an electricity scavenger hunt, playing games that involve renewable energy sources, and creating multi-colored crayons using the sun's power can be both educational and fun.

What are the best solar energy activities for kids?

There are many solar energy activities for kids, so we've split it out into age group. Elementary School Go on an electricity scavenger hunt in your home to find all the places and items that use electricity. Play Power Up!, a game from NASA's Climate Kids program where the goal is to maximize your renewable energy sources to power homes.

Why should kids learn about solar panels?

Explaining the basic principles of solar panels through interactive activities can make learning fun. Teaching children about solar energy empowers them to make environmentally conscious choices. By instilling a love for the environment at a young age, kids can become advocates for clean, renewable energy sources. How Do Solar Panels Work?

What is the energy source - solar power?

Here's the need-to-know stuff about the energy source, solar power! The Sun is a star and without it there would be no life on Earth. This is why the Sun is called the ultimate source of energy. The Sun's energy is produced by a process called nuclear fusion. Every second, the Sun emits vast amounts of energy, much of which is light.

Can a solar cell make electricity?

The steam can be used to make electricity in a power plant. Solar cells use the Sun's light rather than its heat. When the Sun shines on a solar cell, the cell turns the light energy into electricity. A single solar cell makes only a little electricity. However, groups of solar cells can provide electricity for whole buildings.

How does solar power work?

Our sun is a giant ball of fiery plasma about 93 million miles away that is constantly giving off rays of energy. At 109 times the size of Earth, the sun has a lot of energy! Solar power takes some of that energy and uses it to power our homes and electronics. Have you ever noticed how warm and nice it feels when you stand out in sunlight?
