Can solar panels be mounted on a roof?

Naked have seen it all before and can help you find the perfect Solar mounting system to get your solar panels where you want them. We've all seen Solar PV panels mounted on people's roofs and on the roofs of businesses, so here's a rundown of the options to get them up there. By far the most common method for fixing Solar PV panels to a roof.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Can solar panels be installed vertically or horizontally?

The panels themselves can be installed vertically or horizontally. Once the mounting system is set up, it's time for the moment we've all been waiting for: getting the solar panels onto the roof. Your installer will start by placing the solar panels onto the mounting system, without fully securing them just yet.

How do solar panels fit on a roof?

The framework will run both vertically and horizontally across the roof, and will support the base of the solar panels. The mounting system makes sure the panels stay in place, while also helping to position the panels at an optimal angle on the roof, which will lead to more sunlight exposure.

Which direction should solar panels be installed?

“Solar PV (photovoltaic) panels generate electricity from sunlight and will normally be installed on the roof of the building facing in the most south direction. The panels should also face as much south as possible. If you faced east, or west, then expect a yield of around 20% less generation annually” explains David Hilton.

Which direction should solar panels face in the UK?

In the UK, solar panels should ideally face south in order to capture the most daylight throughout the day. It's best to avoid installing solar panels that face north, since there's never much daylight from that direction in the northern hemisphere. Panels can still perform well facing east or west.

Solar PV panel mounting. Wherever you want to stick them, we've got a solution. On a pitched roof, flat roof, garden shed, on the ground or even on a pole.... Naked have seen it all before and can help you find the perfect Solar ...
