

How to open the photovoltaic inverter safety lock

What is the operation and installation manual for Aurora photovoltaic inverter?

Operation and installation manual Page 10 of 82 (PVI-10.0/12.5-OUTD-xx Rev:1.2) FOREWORD This document contains a technical description of AURORA photovoltaic inverter so as to provide the installer and user all the necessary information about installation, operation and use of AURORA.

How do you store an inverter?

Inverter must be packed inside its original carton with the desiccant bags inside. Store the inverter with its front panel facing up. The carton should lay flat and parallel to the ground. Seal the carton with standard packaging tape. Store the inverter in a dry and clean place to protect it against dust and moisture. See notice below.

How many Aurora inverters can serve a photovoltaic system?

AURORA PVI-10.0/12.5-OUTD-xx models can serve two separate arrays. If the photovoltaic system exceeds the capacity of a single inverter, it is possible to add more AURORA inverters to the system and connect every one of them to a suitable section of the photovoltaic field on Dc side, as well as to distribution grid on...

How do you disconnect a PV inverter?

Perform "Commissioning Procedure" on page 4-2. Open the AC circuit breaker (turn it OFF) and perform the "Lock-Out Tag-Out (LOTO) Procedure" on page xi, if not yet done. Open the upstream DC disconnect (turn it OFF). Turn the DC switch of the PV Inverter to OFF position. Pull the DC cable from the MC4 connector. Avoid using standard pliers.

How do you set LVRT on a solar inverter?

Set the LVRT to OFF or ON. When it is ON, the inverter can keep the grid connection for a certain time from when grid fault occurs and provide reactive power for grid recovery. Set to either manual or interval scan. Set to the inverter's operating altitude.

How to maintain a PV inverter?

Fans inside the PV Inverter are used to cool the inverter during operation. If the fans do not operate normally, the inverter may not be cooled down and operational efficiency may decrease. Therefore, it is necessary to maintain the fans and keep them clean and free of debris. If necessary, replace broken fans.

For PV systems you need to control both the DC (before the inverter), and the AC (after the inverter) sides of the circuit. The steps below describe the process of LOTO procedures for systems that are grid-tied, in which the inverter senses ...
