

A gateway in IoT is a device that acts as a bridge between IoT devices and the internet or other networks. It is responsible for collecting data from IoT devices, processing it, and transmitting it to the cloud or other data ...

We have also done projects focused on developing an IoT-based smart Energy Meter, a Smart Electricity Meter with Energy Monitoring, ESP32 Power Meter to calculate input and output power. Let us now discuss the ...

GWIN Government-Wide IoT Network (GWIN) Introduction to Government-Wide IoT Network (GWIN) To assist digitalisation of E& M equipment, the Department is building a government network of wireless sensors installed ...

Internet of Things (IoT) is the networking of physical objects that contain electronics embedded within their architecture to communicate and sense interactions amongst each other or to the external environment. Internet of ...

The **SV900 5G Vehicle Gateway** is a high-performance IoT router designed for demanding mobile environments. It features dual 5G or 5G+4G networks with RedCap technology, ensuring reliable connectivity in harsh ...

How Industrial Linux Enables Distributed IIoT Applications Distributed applications are on the cutting edge of the Industrial Internet of Things (IIoT). By leveraging the latest advances in edge computing, that is, deploying ...

The Internet of Things is revolutionizing our world into a smarter place. The Industrial Internet of Things (IIoT) is part of a bigger IoT system that focuses on devices and objects used in a business environment. Find out ...

Stanford University now offers a **FREE Internet of Things (IoT) Online Course** for 2025 that you can join from anywhere in the world! This human-friendly, easy-to-understand course is perfect for students, professionals, and tech enthusiasts ...

Understanding IoT gateway architecture helps beginners visualize how data flows within IoT systems and clarifies how different components interact. It also emphasizes the importance of ...
