What are microgrids & how do they work?

They can incorporate renewable energy generation (for example, from solar panels or wind turbines) as well as battery energy storage. Some microgrids can operate independently of the grid during power outages (also referred to as islanding), which can be particularly helpful for communities in regional and rural settings.

What is the \$10 million microgrid demonstration initiative?

The \$10 million Microgrid Demonstration Initiative (MDI) supports the development and implementation of microgrid demonstration projects. These projects address key microgrid sector challenges. They also contribute to the unlocking of the microgrid sector in Victoria. The MDI grant program funding supports statewide microgrid projects.

What is a microgrid in San Diego?

The microgrids will include solar, storage and electric vehicle charging. Candice Yu, Shell New Energies business development advisor, and Lindsey Hawes, San Diego's municipal energy program manager, talked about the project at our Microgrid California forum in October. You can watch it here. 2.

Why is Tampa Electric launching a microgrid project?

Tampa Electric sees the project as a way to test the ability of the neighborhood microgrid to ride through upstream AC distribution system disturbances, integrate high levels of renewable energy and reduce the effects of peak load on the utility's transmission and distribution system. 7.

Does Brookville have a microgrid?

Within commuting distance to the nation's capital, the county already has microgrids at correctional and public safety facilities. Now it's building a 5.6 MW microgrid with distributed energy generation, energy storage and over 2 MW of charging capacity at the Brookville Smart Energy Bus Depot.

What is a Victorian microgrid?

The Victorian Government is supporting and developing microgrids. A microgrid can be thought of as a small 'subset' of the electricity grid that provides energy generation and storage at a local level. They can incorporate renewable energy generation (for example, from solar panels or wind turbines) as well as battery energy storage.
