What is a microgrid cost model?

The National Renewable Energy Laboratory was commissioned by the U.S. Department of Energy to complete a microgrid cost study and develop a microgrid cost model. The goal of this study is to elucidate the variables that have the highest impact on costs as well as potential areas for cost reduction. This study consists of two phases.

How much does a microgrid controller cost?

Controller costs per megawatt range from \$3,500/MW to nearly \$600,000/MW (excluding outliers), with a mean of \$85,000/MW. The analysis shows that controller costs as a percentage of total microgrid costs are relatively similar among the projects in our database and the NY Prize data despite the wide variety of system sizes, types, and uses.

What percentage of microgrid costs are soft costs?

Soft costs, which include interconnection, financing, engineering, procurement, and construction management, range from 0.4%-1.6% of total microgrid costs, as shown in Figure 24. Figure 25 shows the total percentage of soft costs in relation to total microgrid costs.

How much does a microgrid cost per megawatt?

The community microgrid market has a mean cost of \$2.1 million per megawatt of DERs installed.

How much does energy storage cost a microgrid?

In commercial and industrial microgrids, energy storage represents 15% and 25% of the total costs per megawatt, respectively. In commercial microgrids, soft costs account for 43%, while in community microgrids they account for 24%.

What is the DOE's microgrid cost study?

The U.S. Department of Energy's (DOE's) microgrid cost study is identifying the costs of components, integration, and installation of U.S. microgrids; project cost improvements; and technical accelerators during the next 5 years and beyond.

Average cycles per day for optimal AHI and PbA systems at different diesel and PV prices. Each X corresponds to the optimal system at a different PV/diesel price combination (PV prices were \$1, \$2 ...

A 2018 study by the National Renewable Energy Laboratory found that microgrids for commercial and industrial customers in the US cost about \$4 million/MW, followed by campus/institution microgrids at \$3.3 ...
