

Mobile solar panels for home use

Where can I buy portable solar panels?

Portable solar panels at Argos. Use the sun's power to charge your devices on the go with portable solar panels. Order online today for fast home delivery.

What are portable solar panels?

Portable solar panels are small, plug-in panels that you can take anywhere with you. Unlike mounted units, portable panels can't power an entire home, but can be used to charge small electrical appliances, such as phones, laptops, or even microwaves. There are typically two types of portable panels: flexible solar panels and rigid foldable ones.

Are portable solar panels a good option for your RV?

A portable solar setup is an excellent choice for RV owners who spend long periods off-grid (known as boondocking or dry camping). With a few portable panels, you can recharge a solar generator whenever the sun is shining and use that energy to run some appliances while you're on a trip.

How much power does a portable solar panel provide?

The amount of power your portable solar panel will provide depends on its wattage, its efficiency rating, and the amount of sunlight it absorbs. Like mounted systems, portable solar panels tend to produce more electricity in the summer than in the winter.

How efficient are portable solar panels?

Most rigid foldable portable solar panels are 15%-20% efficient - the same levels of efficiency as standard mounted solar panels. Some providers, such as EcoFlow, even offer portable solar panels that are up to 23% efficient, though these tend to cost more.

Are portable solar panels better than small Solar panels?

Portable power stations are best for power on the go during camping, RV trips, or boating excursions. Small solar panels are also great for powering small-scale, off-grid projects like barns, sheds, tiny homes, or outdoor lights. Consider size, weight, efficiency, warranty, and price when comparing your portable solar panel options.
