It appears that GA Tech has developed a diode fast enough to rectify a signal at 100s of THz. That allows them to convert light into DC current using a light-frequency antenna followed by a rectifier. Like all things new, the efficiency is not there, yet, but they feel there are orders of magnitude of improvement still possible.

## Nissan leaf photovoltaic

I am planning to get a Leaf this year. I installed a photovoltaic system 2010 and have a state tax credit that I be rolling over for the next three years (about). I am wondering if the tax credit from the photovoltaic system has maxed me out or whether I can still take the state tax credit for the Leaf.
