

What is a solar code of practice?

This Code of Practice sets out the requirements for the design, specification, installation, commissioning, operation, and maintenance of grid-connected solar photovoltaic (PV) systems. Key safety considerations in the protection and earthing of PV systems mounted on buildings and on the ground is covered in detail.

What are the IEC standards for photovoltaic systems?

The IEC also manages global conformity assessment systems that certify whether equipment, systems, or components conform to its international standards. In 2016 and 2020, IEC published two key associated standards: BS EN IEC 62446-1:2016 Photovoltaic (PV) systems - Requirements for testing, documentation and maintenance.

What is the IET PV code of practice?

The IET PV Code of Practice, first published in 2015 and republished in 2022, sets out the requirements for the design, specification, installation, commissioning, operation, and maintenance of grid-connected solar PV systems installed in the UK. It aims to ensure safe, effective, and competently installed PV systems.

What are the new PV standards?

The revised standards adopt widely accepted approaches in a way that specifically addresses PV technology and manufacturing processes. The standards will also support innovation in the design and manufacture of PV modules, and provide greater design flexibility in achieving the most efficient and productive outcomes.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

What is the first international standard governing the safety of PV modules?

The first international standard governing minimum construction requirements for the safety of PV modules was the first edition of IEC 61730, published in 2004.

(d) For non-sprinkler-protected space below arrays, if the PV modules comply with Cl.10.2.2b., a non-combustible separation shall be provided. (5) PV modules, wirings, switchboard assemblies and other equipment shall ...
