

Do I need a building regulations approval for a PV system?

Building Regulations approval may require the product to have passed the wind uplift, water penetration and spread of flame tests (see section 2.1.1.2). These will usually be applicable only where the PV is integrated into the fabric of the building.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

What are the IEC standards for photovoltaic systems?

The IEC also manages global conformity assessment systems that certify whether equipment, systems, or components conform to its international standards. In 2016 and 2020, IEC published two key associated standards: BS EN IEC 62446-1:2016 Photovoltaic (PV) systems - Requirements for testing, documentation and maintenance.

Are PV modules compliant with building regulations?

5.5.4 Where mounting systems are certified or listed using a named PV module or modules then only those modules shall be used. The system is compliant with current Building Regulations for weather-tightness, fire and wind resistance.

What is the best practice manual for rooftop solar photovoltaic systems?

5.11.1 Solar Energy UK have produced an O&M document, Industry best practice manual 2.0: Guidelines for the operation and maintenance of rooftop solar photovoltaic systems. This provides a comprehensive guide to best practice in terms of maintenance in the context of rooftop systems.

Solar panel installation costs. Obviously, solar panel installation costs vary based on the size of the system, location, complexity and equipment chosen. But as a ballpark figure, PV costs about £1,600-2,150 per kWp to install, making a ...

The easiest, most effective way to ensure your solar panels comply with building regulations is to hire an installer who's part of a Competent Person Scheme for microgeneration technology, like NAPIT.
