

What is the minimum wire size for a solar PV system?

JA Solar recommends installers use only sunlight resistant cables qualified for direct current (DC) wiring in PV systems. The minimum wire size should be 4mm². Rating Required Minimum Field Wiring Cables should be fixed to the mounting structure in such a way that mechanical damage of the cable and/or the modules is avoided.

How long do solar panel wires last?

Panel-wiring cable resists high-temperatures, flames, UV rays and moisture. You'll also find that cables for solar panel array wiring last much longer than regular cables - between 25 and 30 years. There are two types of wires: A single wire is obvious - just one wire - while a stranded wire is multi-stranded.

How to install a solar photovoltaic system?

The installer should conform to all the safety precautions listed in this guide when installing the module. Local codes should also be followed in such installations. Before installing a solar photovoltaic system, the installer should become familiar with the mechanical and electrical requirement for such a system.

What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P: Notify the relevant Building Control department before starting the work.

When does a PV installation fall under Part P?

These will usually be applicable only where the PV is integrated into the fabric of the building. Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

Most modern solar panel installations use single-conductor Photovoltaic (PV) wire, between 10 and 12 gauge AWG. Wiring is required to connect the solar panels to the charge controller, inverter, and battery (in an off-grid system).
