

This indicates that the standard value is single and too conservative, and does not consider the fluctuation of wind pressure coefficient along the span direction of flexible PV ...

On the other hand, the wind loads on PV arrays installed parallel to residential gable roof have received relatively less attention. Ginger et al. [14] used a 1/20 scaled model ...

Previous studies focus on the wind load characteristics of roof- or ground-mounted PV structures. Cao et al. [1], Warsido et al. [2], Naeiji et al. [3], Stathopoulos et al. [4], ...

In this paper, we mainly consider the parametric analysis of the disturbance of the flexible photovoltaic (PV) support structure under two kinds of wind loads, namely, mean ...

Flexible photovoltaic (PV) support structures are limited by the structural system, their tilt angle is generally small, and the effect of various factors on the wind load of flexibly ...

Adjustable-tilt solar photovoltaic systems (G&#246;n&#252;l et al., 2022) typically include multiple support columns for the upper structure, leading to a larger panel area and longer ...

Du et al. used the ANSYS 2022R2 finite element software to study the structural wind pressure of a flexible PV support with an increase in the wind azimuth, which refers to the position where the highest absolute value of ...

Photovoltaic (PV) system is an essential part in renewable energy development, which exhibits huge market demand. In comparison with traditional rigid-supported photovoltaic (PV) system, the flexible photovoltaic ...

# Photovoltaic support wind pressure
