

# Portable 120v power

What is the best portable power station?

Anker Solix F2000 (2,048Wh): Previously known as the Anker PowerHouse 767 and previous winner of "best large portable power station" here on CNET. This model has lots to offer by way of features and options -- pretty much anything other than wireless charging. It also performed well on our usable capacity and charge time tests.

Should you buy a portable power station?

Portable power stations have enough bells and whistles to justify adding one to your everyday life as a backup in emergencies. They can also be an inexpensive stand-in for generators when you need to keep your necessities up and running during an emergency like a tornado or general outage.

What is the power output of a portable power station?

Power output of a portable power station refers to the maximum amount of energy the station delivers to the attached devices. Power output ratings are available in terms of wattage. How many watts a device will deliver explains how much power it can produce. The more watts a device can produce, the larger the electrical component it can run.

How much does a portable power station cost?

When choosing portable power stations for this list, we wanted to offer a variety of choices that will fit both your needs and your budget. Small, basic power stations start around \$500, but larger models can cost over \$3,000. We included options at both ends of this range, as well as a few middle-of-the-line choices.

Are portable power stations better than gas-powered generators?

In an emergency, these power stations offer some major advantages over gas-powered portable generators, despite being less powerful. Portable power stations are silent and don't produce additional emissions, so you can use them safely indoors and while you're sleeping.

Are portable power stations safe?

That's where portable power stations come in. While traditional generators are typically powered by gas and are only for outside use, these power stations provide electricity from large batteries that are safe to use indoors. Plus, they're fairly easy to transport, so you can actually take them with you on off-the-grid excursions.
