The higher the energy loss, the lower the efficiency rating. Look for solar inverters with high efficiency ratings between 96% and 99%. Depending on the type, solar inverters will match either your system size or your panel size. The string inverters' maximum output capacity should match your system size.

These days, most inverters are 96% to 99% efficient. The minimum and maximum voltages (expressed in DC) provide a voltage level range at which your system can input solar energy from your panels to your inverter. The wider the range, the better your inverter can perform in more extreme conditions.

Difference Between Standalone Inverters and Inverter Chargers. The standalone inverter is the most common type of power inverter. It basically does just one thing -- inverts DC power from your battery into AC power. The inverter charger, on the other hand, can work as an inverter, transfer relay, and converter/charger -- all in one.
