Power relay for backup camera

A backup camera with optional power source bypass switch is a type of camera that is installed on the back of a vehicle to help the driver see what is behind them while reversing. The optional power source bypass switch allows the camera to be powered by a different source, such as the ignition, in case the original power source fails.

The relay powers: My GPS and another relay (only when the car is turned on though). The 2nd relay doesn't let power flow through it until my car is set to reverse! ?; The camera and monitor turn on and present me with the video from the backup camera mounted on the rear of my car. If the switch is set to position 2:
