

# Ps20 Solar power tower diagram

Where is the PS20 solar power plant located?

The PS20 solar power plant (PS20) solar power plant is a solar thermal energy plant in Sanlúcar la Mayor near Seville in Andalusia, Spain. It was the world's most powerful solar power tower until the Ivanpah Solar Power Facility in California became operational in 2014.

How much electricity does PS20 produce a year?

PS20 produces about 48,000 megawatt-hours (MWh) per year, for which it receives EUR271 (US\$360) per MWh under its power purchase agreement. "First EU Commercial Concentrating Solar Power Tower Opens in Spain";.

How does PS20 work?

"PS20 consists of a solar field of 1,255 mirrored heliostats designed by Abengoa Solar. Each heliostat, with a surface area of 120 m<sup>2</sup> (1,300 sq ft), reflects the solar radiation it receives onto the receiver, located on the top of a 165-metre-high (541 ft) tower, producing steam which is converted into electricity by a turbine generator."

What is a 20 megawatt solar power tower?

The 20 megawatt (MW) solar power tower produces electricity with large movable mirrors called heliostats. Construction of PS20 was started in 2006 and it commenced operation in 2009. It features several significant technological improvements over the earlier PS10.

How does a PS10 solar tower work?

Schematic diagram of the PS10 solar tower using water/steam as HTF. (Source: Abengoa Solar) The solar receiver on top of the tower produces saturated steam and circulates it to a conventional steam turbine. In the turbine, it expands to produce mechanical work and electricity.

How do solar towers work?

Such a system is implemented at the PS10 and PS20 central receiver power plants in Spain and in the Sierra SunTower in the USA. The third system uses air as a HTF. Figure 22 shows the schematic diagram of such a solar tower system. The heat is transferred to air, which is sucked through the receiver structure.
