Renewables play a critical role in clean energy transitions. The deployment of renewables for electricity generation, for heat production for buildings and industry, and in transport is one of the main enablers of keeping average global temperature rise below 1.5°C.

In accordance with the Hong Kong's Climate Action Plan 2050 promulgated in October 2021, the Government is grappling with Hong Kong's geographical and environmental constraints in driving the development of Renewable Energy (RE), and strive to increase its share in the fuel mix for electricity generation to 7.5% to 10% by 2035, and further ...

For the 760 million people in the world who lack access to electricity, the introduction of modern clean energy solutions can enable vital services such as improved healthcare, better education, and internet access, thus creating new jobs, improving livelihoods, and reducing poverty.

2021 (Renewables 2021) 2021) 2026) , ,

Fast and effective renewable energy innovation is critical to meeting climate goals. Here are five solutions that could help countries meet emissions targets. The need for renewable energy innovation has never been greater.

Based on the availability of data, this paper identifies six specific factors that affect the trade flows of renewable energy products in China: GDP (US\$ million), population size, export trade of renewable energy products (US\$ million), the ratio of exports of

Renewables 2023. Executive summary. 2023 saw a step change in renewable capacity additions, driven by China's solar PV market. Global annual renewable capacity additions increased by almost 50% to nearly 510 gigawatts (GW) in 2023, the fastest growth rate in ...

Renewable Energy (RE) offers proven alternatives to the burning of fossil fuels for power generation. The Government is committed to the development of RE in Hong Kong with a view to further improving our air quality.
