

This thesis is dedicated to extensive studies on efficient and stable power generation by solar photovoltaic (PV) technologies. The three major original contributions reported in this thesis ...

Solar photovoltaic (PV) is a promising and highly cost-competitive technology for sustainable power supply, enjoying a continuous global installation growth supported by the ...

In this paper, both methods of electricity generation are reviewed and compared. Based on published studies, PV-based systems are more suitable for small-scale power generation. ... and it can be used as ...

In addition, a comparison is made between solar thermal power plants and PV power generation plants. Based on published studies, PV-based systems are more suitable for small-scale power ...
