Solar is now the cheapest form of electricity in history. Along with suitable methods of energy storage such as batteries, we can help power the transition to net zero. We follow three key mission goals when developing our sites: tackle climate change, enhance the natural environment and engage with local communities along the way.

Three things make this possible. First, tax credits incentivize the building of community solar farms. Second, your local solar farm is backed by Nautilus Solar, with 127 solar farms and over 40,000 subscribers, we know how to create solar power efficiently. Thirdly, community solar power is cheaper to produce than coal, gas, or nuclear power.
