

Does operational and maintenance affect onshore wind and solar photovoltaic (PV) lifecycle costs?

In 2017, operations and maintenance (O&M) accounted for 20%-25% of lifecycle costs for wind and solar plants in Europe, but the understanding of O&M dynamics is limited. Presenting new data from Germany, here, we consider cumulative operating experience to estimate O&M experience curves for onshore wind and solar photovoltaic (PV).

Are solar PV projects reducing the cost of electricity in 2022?

Between 2022 and 2023, utility-scale solar PV projects showed the most significant decrease (by 12%). For newly commissioned onshore wind projects, the global weighted average LCOE fell by 3% year-on-year; whilst for offshore wind, the cost of electricity of new projects decreased by 7% compared to 2022.

How does a cost model estimate a photovoltaic system?

This report describes both mathematical derivation and the resulting software for a model to estimate operation and maintenance (O&M) costs related to photovoltaic (PV) systems. The cost model estimates annual cost by adding up many services assigned or calculated for each year.

How much does solar PV cost?

In sum, solar PV O&M cost decreased from an average of 47.60 EUR 2017 /kW p /a in 2005 down to 7.05 EUR 2017 /kW p /a in 2017, a remarkable reduction of 85% (Figure 4 B). Point estimates for experience rates (Figure 4 C) are between 15.7% and 18.2%, and the confidence intervals are much smaller than for onshore wind.

How has the cost of solar PV changed over the last decade?

The cost of electricity from solar PV and CSP fell 82% between 2010 and 2019. Cost improvements since 2010 were driven mainly by the 90% reduction in module prices, along with declining balance-of-system costs. These pushed total solar PV installed costs down almost four-fifths over the last decade.

How does cumulative operating experience affect onshore wind & solar photovoltaic (PV) costs?

Presenting new data from Germany, here, we consider cumulative operating experience to estimate O&M experience curves for onshore wind and solar photovoltaic (PV). Results indicate O&M cost reductions with each doubling of cumulative experience of 9.2%-12.8% for onshore wind and of 15.7%-18.2% for solar.
