

Solar power for churches

Should a church install solar energy?

In the age of clean energy and efficient building design, most, if not all, locations can benefit from solar energy, and holy buildings such as churches, mosques, and synagogues are certainly one of them. In this article, we'll explain why congregations of all faiths should consider installing on their community's church.

Why should a church install a solar system?

Installing a solar system at a church can inspire members of the congregation to go green and encourage other businesses and organizations to switch to renewable energy sources. Temple Beth is an example of a large solar installation on a US house of worship, demonstrating the benefits.

Can a house of worship use solar panels?

Neumann added that houses of worship are perfect places for solar panels because during the week, when the building isn't used as much, their clean energy can be used by households and businesses in their community, but on Sundays or holy days, they can tap the solar to power their own building with clean renewable energy.

Why are houses of worship going solar?

Faith leaders and solar installers discuss how and why houses of worship are going solar and how the clean energy tax credits in the Inflation Reduction Act can help. Houses of worship across America are going solar -- putting their values into action, helping protect God's creation, and saving money on their electric bills at the same time.

Should churches invest in solar panels?

Prior to installing solar panels, Neusch, the senior leader of the pastoral team at the church, had done extensive research and considered the long-term benefits of the investment. He said solar saves his congregation money and sends a message that they care about the environment.

How do church solar panels generate electricity?

Instead of receiving electricity from the grid, church solar panels generate their own electricity from the sun. The generated electricity is monitored by the electric company, but you will not be charged for each kilowatt-hour you use since you're producing it yourself. You will also be able to store the power for later use.

Now that it has solar panels, the church needs to buy less power from utilities. That's expected to lower the energy bill. It's an example of a power purchase agreement. By purchasing the ...
