

Solar power generation heating and drying

Solar-aided power generation (SAPG) is a promising way to achieve clean and efficient production of electricity. An efficient solar/lignite hybrid power generation system was ...

for live steam generation and bagasse drying are 12.34 % and 17.34 % respectively. This can be increased if the integration points are allowed to operate outside of the crushing season, if ...

An efficient solar/lignite hybrid power generation system was proposed in the paper, in which solar energy was amplified in solar-driven heat pump cooperating with waste ...

PYQs on Solar Energy. Question 1: With reference to technologies for solar power production, consider the following statements: (UPSC Prelims 2014) "Photovoltaics" is a technology that generates electricity by direct conversion of ...
