What equipment do I need for a solar panel system?

While you may also need other components, like mounting brackets and additional wiring (see solar panel connector types guide), gaining an understanding of the four main pieces of equipment is a great place to start. Solar panels are the most iconic piece of solar equipment and they are the foundation of any solar panel system.

What is solar energy equipment?

Solar energy equipment consists of the components that make up a solar energy system. The installation of the equipment allows for the harnessing of the sun's energy as well as its conversion into the electricity that is necessary for the home or business in question.

Where are solar panels installed?

Solar panel systems for households or businesses are most commonly installed on either the roof, or mounted on the ground. The term racking refers to the structural systems that secure the solar panels in place.

What are the components of solar equipment?

Among the solar equipment, we also find several of the key components, such as solar panels, inverters, and racking systems. Solar panels are the components that harness and store the energy produced by the sun. Photovoltaic solar panels (PV), are composed of silicon semiconductors, which capture energy from the sun's rays.

Why should you install solar equipment?

The installation of the equipment allows for the harnessing of the sun's energy as well as its conversion into the electricity that is necessary for the home or business in question. Among the solar equipment, we also find several of the key components, such as solar panels, inverters, and racking systems.
