How do solar panels for swimming pools work?

Here's how it works. Solar panels for swimming pools is a combination that makes sense, especially if you're heating a pool that you mainly use during the summer. With daylight in greater abundance during this time, using renewable energy can help cut the expensive costs of heating the water.

Are solar panels good for a swimming pool?

Solar panels are a planet-friendly option for heating your swimming pool. Maintenance is relatively minimal, mainly involving cleaning and occasional checks. There are two main types: solar pool heating systems and PV systems.

How many solar panels do you need for a swimming pool?

According to the Swimming Pool and Allied Trades Association (SPATA), you should aim for panel coverage of at least 50% of your pool's surface area. For a typical 11m x 4m pool, that's a minimum of 22m² of panels. The number of solar panels you'll need to power a swimming pool varies depending on the pool's surface area.

Is solar heating a good option for a swimming pool?

Aside from their high grade efficiency and reliability, swimming pool solar heating is one of the most cost effective methods out there, given that all the heat produced is essentially free of charge. As expected, the effectiveness of solar heating relies on uninterrupted access to the sun.

Can solar power warm up a pool?

By harnessing the sun's energy, solar power warms up your pool, extends your swimming session and slashes your energy bills, helping you to make your money back on the initial upfront costs of solar panels. This can be a big plus if you're in the UK, where our temperamental weather can make conventional pool heating unexpectedly pricey.

Should you invest in a solar pool heating system?

You can also use solar pool heating panels to directly heat the water. This setup makes your pool more sustainable and can save on energy costs. And with the cost of solar panels reducing massively over the past decade, it's never been a better time to invest.
