

Is Solar System Comics CC-BY-SA?

Community content is available under CC-BY-SA unless otherwise noted. Solar System Comics, abbreviated to SSC, is an animated YouTube series created by pluto dooto, inspired off of shows such as Battle for Dream Island, along with a similar show called Weird and Wonderful Space.

How many episodes of Solar System comics are there?

Solar System Comics, abbreviated to SSC, is an animated YouTube series created by pluto dooto, inspired off of shows such as Battle for Dream Island, along with a similar show called Weird and Wonderful Space. It currently has 3 episodes and 2 short episodes, with a 4th episode currently in production.

Who created solar comic books?

Solar was created in 1962 by writer Paul S. Newman and editor Matt Murphy, with illustrations from artist Bob Fujitani, for the Silver Age comic book publisher Gold Key, a new company formed by Western Publishing who, earlier that year, had ended its business arrangement with Dell Comics.

55 Cancri e (abbreviated 55 Cnc e, formally named Janssen /ˈdʒɑːnsən/) is an exoplanet in the orbit of its Sun-like host star 55 Cancri A. The mass of the exoplanet is about 8.63 Earth masses and its diameter is about twice that of the Earth,^[4] thus classifying it as the first super-Earth discovered around a main sequence star, predating Gliese 876 d by a year. It takes less than ...

Titania, also designated Uranus III, is the largest of the moons of Uranus and the eighth largest moon in the Solar System at a diameter of 1,578 kilometres. Discovered by William Herschel in 1787, Titania is named after the queen of the fairies in Shakespeare's *A Midsummer Night's Dream*. Titania consists of approximately equal amounts of ice and rock, and is probably ...

Ophelia is a moon of Uranus. It was discovered from the images taken by Voyager 2 on January 20, 1986, and was given the temporary designation S/1986 U 8.^[8] It was not seen until the Hubble Space Telescope recovered it in 2003.^[7]^[9] Ophelia was named after the daughter of Polonius, Ophelia, in William Shakespeare's play *Hamlet*. It is also designated Uranus ...

Oberon /ˈoʊbəroʊn/, also designated Uranus IV, is the outermost major moon of the planet Uranus. It is the second-largest and second most massive of the Uranian moons, and the ninth most massive moon in the Solar System. Discovered by William Herschel in 1787, Oberon is named after the mythical king of the fairies who appears as a character in Shakespeare's *A ...*

The Solar System [d] is the gravitationally bound system of the Sun and the objects that orbit it. ^[11] It formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, forming the Sun and a protoplanetary disc. The Sun is a typical star that maintains a balanced equilibrium by the fusion of hydrogen

into helium at its core, releasing this energy from its ...

Gallery. Community content is available under CC-BY-SA unless otherwise noted. Uranus is often confused and feels like everyone hates him because he is weird, but that is not true. He really only feels like Neptune is his friend.

Solar System. The Solar System[b] is the gravitationally bound system of the Sun and the objects that orbit it, either directly or indirectly. [c] Of the objects that orbit the Sun directly, the largest ...

Titan is the largest moon of Saturn and the second-largest natural satellite in the Solar System. It is the only moon known to have a dense atmosphere, and the only known body in space, other than Earth, where clear evidence of stable bodies of surface liquid has been found.[15] Titan is one of six gravitationally rounded moons from Saturn, and the most distant from Saturn of ...

Pluto, labeled The Funny, is a dwarf planet in the solar system. He is meant to be the main character but he only really acts as the mascot, because plot-wise, another character is the protagonist. Pluto is a tan sphere with darker tan patches at the north pole, a large heart on his bottom center and dark brown patches on either side. He is relatively small compared to most ...

The Moon is Earth's only proper natural satellite. It is one quarter the diameter of Earth (comparable to the width of Australia[13]) making it the largest natural satellite in the Solar System relative to the size of its planet. It is the fifth largest satellite in the Solar System and is larger than any dwarf planet. The Moon orbits Earth at an average lunar distance of 384,400 km (238,900 ...

Uranus, labeled The Nervous One is the 7th planet from the Sun and is extremely shy . He is also the planet that has a steep axial tilt being 98°176;. Uranus is a light blue sphere with darker outline. He has a lighter spot and darker bands to represent clouds on his surface. He is tilted almost 90 degrees on his side. His rings are just a dark grey circle. SSC 1: Uranus is solid cyan and has ...

Uranus, labeled The Nervous One is the 7th planet from the Sun and is extremely shy . He is also the planet that has a steep axial tilt being 98°176;. Uranus is a light blue sphere with darker outline. ...

Ceres ⁱˈsɪˈriːz[16] (minor-planet designation: 1 Ceres) is the largest object in the main asteroid belt that lies between the orbits of Mars and Jupiter. With a diameter of 940 km (580 mi), Ceres is both the largest of the asteroids and the only dwarf planet inside Neptune's orbit.[c] It is the 25th-largest body in the Solar System within the orbit of Neptune. Ceres was the first asteroid ...

Kepler-442 is a K-type main-sequence star approximately 1,206 light years from Earth in the constellation Lyra. It is located within the field of vision of the Kepler spacecraft, the satellite that NASA's Kepler Mission used to detect planets that may be transiting their stars. On January 6, 2015, along with the notable stars of Kepler-438 and Kepler-440, it was announced that the ...

Saturn, labeled The Beauty Queen, is the 6th planet from the Sun, and the second largest planet in the solar system. Saturn is a tan sphere with darker tan bands to represent clouds, her rings are brown with darker and lighter stripes. SSC 1: Saturn's rings are solid brown. SSC 2: Saturn gets more orangeish, her rings gain detail. SSC 3: Saturn gains the blue patch on her north ...

S/2009 S 1 is a "propeller moonlet" of Saturn orbiting at a distance of 117,000 km (73,000 mi), in the outer part of the B Ring, and with a diameter of 300 m (1,000 ft).[3] The moonlet was discovered by the Cassini Imaging Team during the Cronian equinox event on 26 July 2009,[4] when it cast a shadow 36 km (22 mi) long onto the B Ring. S/2009 S 1 protrudes 150 m (500 ...

Umbriel /'mbri?l/ is a moon of Uranus discovered on October 24, 1851, by William Lassell. It was discovered at the same time as Ariel and named after a character in Alexander Pope's poem The Rape of the Lock. Umbriel consists mainly of ice with a substantial fraction of rock, and may be differentiated into a rocky core and an icy mantle. The surface is the darkest among Uranian ...

Haumea (minor-planet designation 136108 Haumea) is a dwarf planet located beyond Neptune's orbit. It was discovered in 2004 by a team headed by Mike Brown of Caltech at the Palomar Observatory in the United States and disputably also in 2005 by a team headed by José Luis Ortiz Moreno at the Sierra Nevada Observatory in Spain. On September 17, 2008, it was named ...

Jupiter, labelled The Jerk, is the 5th planet from the sun. He is extremely short tempered and is always in a bad mood. He does secretly care about his moons, and the other planets as well. Jupiter is a large, brown and tan gas ball with orange stripes. He also has a Great Red Spot that is really an orange color. SSC 1: Jupiter has no rings. SSC 2: Jupiter is desaturated, and gains ...

Ceres, labelled The Scaredy Cat, is a dwarf planet and asteroid in the solar system. Ceres is a grey sphere with lighter shading on his left. He has multiple dark circles on his surface to represent craters. SSC 1: Ceres is darker. SSC 2: Ceres is lighter. SSC 3: Ceres gains a large blue patch and is lighter. He also has a slight blue tint. Ceres is afraid of almost everything, ...

Ganymede is self-centered as he is the largest moon in the solar system, but he has a friendly/helpful side as well. Solar System Comics Wiki. Explore. Main Page; Discuss; All Pages; Community; Interactive Maps; Recent Blog Posts; ... Solar System Comics Wiki is a FANDOM Comics Community.
