

Solar system dogon tribe

What is Dogon astronomy?

One of the most compelling aspects of Dogon astronomy is their detailed understanding of the Sirius star system. The Dogon people have long known about Sirius A, the brightest star in our night sky, and its companion star, Sirius B, which is invisible to the naked eye and was only confirmed by Western astronomers in the 20th century.

What did the Dogon know about the Sirius star system?

One of the most astonishing aspects of the Dogon's knowledge is their detailed awareness of the Sirius star system. According to their legends, the Dogon were visited by the Nommos, amphibious beings from the star Sirius, who imparted their wisdom to the tribe.

What does the Dogon tribe know about Sirius B?

Central to their cosmology is their profound understanding of the Sirius star system, particularly the star known as Sirius B. This article delves into the fascinating lore of the Dogon tribe, exploring their cosmic knowledge and the mysteries that have captivated the world. [The Dogon Tribe: A Brief Overview](#)

Did the Dogon tribe have a connection to the stars?

Although the Dogon live in an area more than 2,000 miles from Egypt, they have a history that appears to have some intriguing connections with its famed, ancient lineage that hinted at some connection to the stars. Upon studying the Dogon tribe, anthropologist Marcel Griaule learned of their obsession with the Sirius star system.

Did the Dogon have astronomical knowledge?

Their extensive fieldwork revealed that the Dogon had an intricate understanding of the cosmos, which they claimed was imparted to them by beings from the Sirius star system. This revelation sparked widespread interest and debate, leading to numerous studies and speculations about the source of the Dogon's astronomical knowledge.

Did astronomers and Dogon tribes transfer culture?

Noah Brosch explained in his book *Sirius Matters* that cultural transfer could have taken place between 19th century French astronomers and Dogon tribe members during the observations of the solar eclipse on 16 April 1893.

The Dogon people of Mali are believed to have originated in ancient Egypt, though they have stories of traveling from the Mande kingdom. ... They gave the Dogon information about their solar system as well as our own. These same creatures also appear in Babylonian and Sumerian myths. Oddly, the Dogon did have knowledge for centuries that were ...

Solar system dogon tribe

The Dogon Tribe originates from Africa, yet many of the legends from their heritage were used by the Egyptians and subsequent dynasties. ... (Po Tolo is the 2nd closest star system to our solar system; being only eight light years away). Po Tolo is also made of the smallest and heaviest of things, which the Dogon describe as a metal called ...

The Dogon people with whom the French anthropologists Griaule and Germaine Dieterlen worked during the 1930s and 40s had a system of signs which ran into the thousands, including "their own systems of astronomy and calendrical measurements, methods of calculation and extensive anatomical and physiological knowledge, as well as a systematic ...

1.018 M[?] (Solar Masses) Radius: 0.0084 R[?] (Solar Radii) Surface Temperature: Approximately 25,200 K: Orbital Period: 50.1 years: ... The Dogon's description of the star system. The Dogon people's understanding of the Sirius star system is remarkably detailed and accurate, considering the lack of advanced astronomical instruments. ...

The Mystery of Sirius. One of the most compelling aspects of Dogon astronomy is their detailed understanding of the Sirius star system. The Dogon people have long known about Sirius A, the brightest star in our night ...

The Dogon people had information about planets in Earth's solar system before scientists made those discoveries, including the fact that Saturn has rings or that Jupiter has four major moons. The Dogons also have ancient texts that discuss a third star in the Sirius system that they call "Emme Ya", which was not identified or discovered ...

The Dogon call these aliens the Nommos. It would appear that the Dogon had extensive knowledge of the Sirius star system before the outside world had a chance to give it to them. In other words, the Dogon tribe would not only need the knowledge but also a telescope in order for them to have the information they already seemed to possess.

In Mali, West Africa, lives a tribe of people called the Dogon. The Dogon are believed to be of Egyptian decent and their astronomical lore goes back thousands of years to 3200 BC. ... on to say the Nommos also furnished the Dogon's with some interesting information about our own solar system: That the planet Jupiter has four major moons, that ...

The Dogon's cosmology includes a heliocentric model of the solar system, acknowledging that the Earth and other planets revolve around the Sun--a concept that was not widely accepted in Western thought until the ...

Reaching the edge of the Cliffs of Bandiagara is an experience words and photographs can hardly convey. After traveling two thousand kilometers through the stubbornly flat savanna of West Africa, from the Atlantic coast to the heart of Mali, reaching the cliffs is like reaching a great turning point. The cliffs stretch 200 kilometers in length and the walls plummet 200, 300, ...

Solar system dogon tribe

The Dogon call these aliens the Nommos. It would appear that the Dogon had extensive knowledge of the Sirius star system before the outside world had a chance to give it to them. In other words, the Dogon tribe would ...

The Basics of Sirius. Sirius is a binary star system, which means that it consists of two stars that orbit around each other. The larger of the two stars is Sirius A, which is a main-sequence star of spectral type A1V. It has a mass of 2.1 times that of our Sun and a surface temperature of about 9,940 Kelvin. The smaller star is known as Sirius B, and it is a white ...

Dogon is popular due to ancient tales based on human beings as well as extraterrestrial contact. According to the legend, the race was known as Nommo, which appeared from the brightest star, Sirius. Arriving on Earth, they shared information about cosmology and the solar system. All these creatures were also part of Babylonian and Sumerian myths.

The Dogon People: an Unknown History Located 800 km northeast of Bamako, the capital of Mali, 120 km from Mopti and 45 km from Bandiagara, the Dogon country covers an area of 48,374 km²; ... organizes the solar system, and lastly, the earth. The Nommo, born of the union between Amma and the earth, is related to water, the source of life ...

During the solar eclipse of 1893, astronomers spent several weeks deep in the Dogon territory. It's possible that they could have shared a few cosmological tips with curious tribespeople while they were in the area. Some ...

Walter Van Beek, an anthropologist, visited the Dogon tribe in 1991 and concluded that nobody within the Dogon tribe had ever heard of Sirius, *sigu tolo* or *po tolo* outside of the few men who interacted with Griaule. When Griaule had visited the Dogon tribe in 1931, by this time, most of the Western world was already well aware of Sirius.

The Dogon Tribe and Atlantis In 1971, the American author Robert Temple published a controversial book entitled *The Sirius Mystery* where he claimed that the Dogons (an ancient African tribe from Mali) knew details about Sirius that would be impossible to be known without the use of telescopes. According to him, the Dogon understood the binary nature of ...

The Dogon were also aware that the Saturn of our own solar system had a ring, and they knew of the four major Galilean moons of Jupiter. The Dogon were also well aware that it was the turning of the Earth that caused the sky to shift, unlike much of Europe until the Copernican Revolution in 1543.

Historically, Dogon villages were established in the Bandiagara area in consequence of the Dogon people's collective refusal to convert to Islam a thousand years ago. ... to earth at some point in the distant past and had imparted knowledge about the Sirius star system as well as our own solar system upon the Dogon tribes.

Solar system dogon tribe

4:30 Made popular by the work of Robert Temple and Carl Sagan, the Dogon Tribe of Africa is a modern-day primitive tribe that acts as a great entry point to the study of ancient African cultures and ancient creation mysteries.
