

The photovoltaic inverter cannot be equipped with a switch

Do solar inverters need a transfer switch?

In some cases, the solar system does not connect to the grid. So the auto solar transfer switch must toggle the load between the PV system and a different source, such as a generator. But solar inverters usually come with built-in mechanisms to switch between power sources. So, where would you need the transfer switch?

Can I touch the PV panels when the inverter switch is on?

Do not touch the PV panels or any rail system connected when the inverter switch is ON, unless grounded. **WARNING!** SafeDC complies with IEC60947-3 when installing the system with a worst case SafeDC voltage (under fault conditions) < 120V. **CAUTION!** This unit must be operated according to the technical specification datasheet provided with the unit.

Can I use PV inverters in off-grid systems?

You can use the following PV inverters in off-grid systems. You can order all the listed PV inverters with preset off-grid parameters from SMA Solar Technology AG. The PV inverters must be equipped with at least the firmware version given in the table, or a higher version.

Do I need a firmware update for my PV inverter?

The PV inverters must be equipped with at least the firmware version given in the table, or a higher version. If this is not the case, perform a firmware update (see PV inverter documentation). In off-grid systems, the nominal AC power of the PV system must not be more than double the nominal AC power of the Sunny Island inverters.

Can a PV inverter be set to stand-alone mode?

The PV inverter can be set to stand-alone mode and reduce its feed-in power if this is required by the battery state of charge or the energy demand of the connected loads. To do this, use the integrated frequency-shift power control (FSPC). Selecting the PV Inverter You can use the following PV inverters in off-grid systems.

How to power off a solar inverter?

1. Turn on the AC switch between the solar inverter and the power grid.
2. (Optional) Remove the screws that secure DC SWITCH 1, DC SWITCH 2, and DC SWITCH 3, and keep the screws properly for the power-off maintenance later.
3. Set DC SWITCH 1 (MAIN SWITCH) at the bottom of the solar inverter chassis to ON.
