

Tonight sky live

It's setting by the time the sky is fully dark. Saturn is visible toward the southeast as soon as it gets dark out, and sets by dawn. Mars rises around midnight all month. By dawn it has climbed quite high into the south-southeastern sky, appearing together with Jupiter. Now, Jupiter is rising in the first half of the night.

Our Interactive Night Sky Map simulates the sky above Live. The Moon and planets have been enlarged slightly for clarity. The Moon and planets have been enlarged slightly for clarity. On mobile devices, tap to steer the map by pointing your device at the sky.

This section provides a comprehensive list of the bright comets currently visible in the sky. This list is updated with new information several times per day. Comets for which there is data from recent observations reported in the Comet Observation database (COBS) are listed first, in order of decreasing brightness.

About these feeds: These images are from observatories around the world. Most of them are webcam images that are near-real-time, typically captured within the last 5 - 15 minutes. At this stage the only live video stream is from the Subaru telescope.. Some of these cameras show only night-time views, some only day-time, some show both.
