What is a ups & how does it work?

The UPS (uninterruptible power supply) is a device that provides emergency power to your computer's electrical components when the main power goes out. It helps protect your data and equipment from power surges and outages that can occur during lightning storms, brownouts, and sags.

Why should you use an ups power supply?

While UPS power is great for avoiding a sudden shutdown, you should not expect it to power your equipment for long hours without additional electrical backup, such as a generator. The main purpose of a UPS is to give you time to switch to alternative power or properly shut down your machine. Benefits of an uninterruptible power supply.
