How much energy does the United States produce a year?

U.S. total annual energy production has exceeded total annual energy consumption since 2019. In 2023, production was about 102.83 quads and consumption was 93.59 quads. Fossil fuels -- petroleum, natural gas, and coal -- accounted for about 84% of total U.S. primary energy production in 2023.

What is the largest source of energy in a state?

Most often, natural gas is the largest source in a given state, with 22 states using it more than any other. Among renewable sources, 18 states use wind power more than any other. Though not always the most prominent source, each state will use at least one source at a rate above the national average.

Which energy sources provide more energy to Americans?

In recent decades, renewable sources -- biomass, wind, hydroelectric, solar, and geothermal -- contributed more energy to Americans. Among zero-emissions energy sources, nuclear power continues to provide Americans with more power than individual renewable sources, according to the Energy Information Administration.

What types of primary energy sources are consumed in the United States?

The chart below shows the types and amounts of primary energy sources consumed in the United States, the amounts of primary energy consumed by the electric power sector and the energy end-use sectors, and sales of electricity by the electric power sector to the energy end-use sectors.

How much energy does the US use in 2021?

In 2021, Americans consumed 100.53 quadrillion BTUs of energy. About 79% of the energy consumed in the US came from fossil fuels. While fossil fuels remain the primary energy source for Americans, renewable energy sources have provided an increasing amount of energy in recent decades. Energy is measured in large numbers.

How much energy does the US export?

Net energy exports for the US were 3.62 quadrillion BTU. Since 2019, the US has exported more energy than it has imported. Between the 1950s and the early 2000s, the US imported increasingly more energy products like gasoline than it exported, according to data from the Energy Information Administration.

Overview History Primary energy production Final energy consumption Electricity See also External links Energy in the United States is obtained from a diverse portfolio of sources, although the majority came from fossil fuels in 2021, as 36% of the nation's energy originated from petroleum, 32% from natural gas, and 11% from coal. Electricity from nuclear power supplied 8% and renewable energy supplied 12%, which includes biomass, wind, hydro, solar and geothermal.

On Feb. 24, 2022, the U.S. Department of Energy released America's first comprehensive plan to ensure security and increase our energy independence. The sweeping report, "America's Strategy to Secure the Supply Chain for a Robust Clean Energy Transition,"

The United States (US) has put in place significant energy and climate policy reforms designed to put the country on a path towards a clean, secure and affordable energy system for a net zero economy while promoting equity and ...

Data source: U.S. Energy Information Administration, Monthly Energy Review Note: Positive net imports mean the United States imported more energy than it exported, while negative net imports mean the United States exported more energy than it imported. Data are for the first seven months of 1974 and 2024. Total energy includes coal, natural gas, petroleum, nuclear, and renewables.

Technologies for generating wind and solar energy are expected to green the economy faster than electric cars and heat pumps, according to deep decarbonization studies. That was evident in 2023 as ...

U.S. Energy is a growth-focused energy company engaged in operating a portfolio of high-quality producing assets that will allow the Company to execute on an attractive capital returns program to shareholders. U.S. Energy Corp. is headquartered in Houston, TX and listed on the Nasdaq CM under the symbol USEG

Founded in 1980, U.S. Energy Development Corporation (U.S. Energy) is a privately held exploration and production (E& P) firm that manages assets for itself and its partners. For more than four decades, U.S Energy has blended operational and financial innovation with a forward-looking approach.

As United States Secretary of Energy, Jennifer M. Granholm leads an agency tasked with maintaining a safe, secure and effective nuclear deterrent and reducing the threat of nuclear proliferation, overseeing the United States' energy supply, carrying out the environmental clean-up from the Cold War nuclear mission, and the 17 National ...

Economy US gross domestic product (GDP) increased 1.9% in 2022 and another 2.5% in 2023. Year-over-year inflation -- the rate at which consumer prices increase -- was 3.1% in January 2023. The Federal Reserve raised interest ...

The United States joined more than 20 other nations last year in pledging to triple nuclear energy capacity globally by 2050.. Together, they committed to supporting the development and construction of nuclear reactors, mobilizing investments in nuclear power, promoting resilient supply chains, and recognizing the importance of extending the lifetimes of ...

How did U.S. energy consumption change in 2023? Renewable energy consumption in the United States increased 2% from 2022 to a record 8.2 quads in 2023, largely because of increased use of biofuels in transportation and solar to generate electricity. In 2023, U.S. wind consumption decreased for the first time in

25 years. Coal consumption declined to 8.2 quads ...

EERE is working to achieve U.S. energy independence and increase energy security by supporting and enabling the clean energy transition. The United States can achieve energy independence and security by using renewable power; improving the energy efficiency of buildings, vehicles, appliances, and electronics; increasing energy storage capacity; and ...

Total U.S. energy production increased by 5.7 percent in 2019 while U.S. energy demand decreased by 0.9 percent. The United States produced 101.0 quadrillion British thermal units (quads) of energy and consumed 100.2 quads last year. Fossil fuels accounted for 80 percent of both energy consumption and production in 2019.

Secretary of Energy of the United States Jennifer Granholm and the Federative Republic of Brazil's Minister of Mines and Energy, Alexandre Silveira announced new, joint initiatives on clean energy and renewed their commitment to advance a just and inclusive energy transition today at the third ministerial meeting of the U.S.-Brazil Energy Forum (USBEF).

Transitioning the United States to a clean energy economy enhances economic growth, energy independence, and the health and well-being of the American people. Learn more. Renewable Energy EERE's applied research, development, and demonstration activities aim to make renewable energy cost-competitive with traditional sources of energy. Learn ...

One is that the type of energy we import (e.g., crude oil) is a better fit for our energy systems than the energy we produce ourselves. For example, U.S. refineries are well-suited to process ...

USA Energy is an energy broker that helps businesses find the best energy plans and providers for their needs. We specialize in navigating complex energy markets to help clients save money and reduce energy usage. Our team of energy experts provides personalized advice and support to businesses of all sizes and industries. We are committed to ...

By Carla Frisch, Acting Executive Director and Principal Deputy Director, DOE's Office of Policy. By all accounts, 2021 was a year of momentous firsts and milestones for the U.S. Department of Energy (DOE) where we're working on behalf of Secretary Jennifer M. Granholm and the greater Biden-Harris Administration to tackle the climate crisis; create good-paying, ...

Allan joins USA Energy LNG after retiring from Macquarie Commodity and Global Markets Group, a top-tier international energy trading firm. Allan's expertise is fortified by an MBA in Management and Finance, coupled with disciplined leadership skills honed during his military service in the United States Navy.

The Department of Energy (DOE) manages the United States' nuclear infrastructure and administers the country's energy policy. The Department of Energy also funds scientific research in the field. Have a

Our Energy Impact by the Numbers. Pairing a comprehensive portfolio with unrivaled capabilities, at U.S. Energy(TM), we'll build a tailored energy strategy that works for you--today and into the future. Our vertical integration across the energy supply chain delivers exclusive access to refined products, alternative fuels, and environmental ...

Energy transformation. Energy sources, particularly fossil fuels, are often transformed into more useful or practical forms before being used. For example, crude oil is refined into many different kinds of fuels and products, while coal, oil and natural gas can be ...

USA Energy LNG is a developer of onshore and offshore LNG projects in the Gulf of Mexico and other strategic export locations in North America. We work with buyers, sellers, contractors, suppliers, government and local communities to bring clean energy LNG around the globe.

Consumption of all forms of energy increases in the United States between 0% and 15% from 2022 to 2050 in our Annual Energy Outlook 2023 (AEO2023). Our projection of growth in U.S. energy consumption is the result of the effects of economic growth, population growth, and increased travel offsetting continued energy efficiency improvements.

In 2022, annual U.S. renewable energy generation surpassed coal for the first time in history. By 2025, domestic solar energy generation is expected to increase by 75%, and wind by 11%. The United States is a resource-rich country with enough renewable energy resources to generate more than 100 times the amount of electricity Americans use each ...

The Annual Energy Outlook 2023 (AEO2023) explores long-term energy trends in the United States. Since we released the last AEO in early 2022, passage of the Inflation Reduction Act (IRA), Public Law 117-169, altered the policy landscape we use to develop our projections. The Appendix in this report explains our assumptions around IRA ...

Although only in existence since 1977, the Department traces its lineage to the Manhattan Project effort to develop the atomic bomb during World War II, and to the various energy-related programs that previously had been dispersed throughout various Federal agencies. Learn more.
