

USB device draining system power when system is idle

I have a 11th gen Framework Laptop and at some point recently Windows (10) started sending me notifications about a unknown usb device drawing too much power. I tested around a bit with my expansion cards (no other usb devices were plugged in) and this issues comes up when any card is plugged in at any port.

This tutorial will show you how to turn on or off USB selective suspend for a power plan in Windows 10 and Windows 11. USB selective suspend is the ability to power down and later resume an idle USB device while the computer to which it is attached remains

USB device draining system power when system is idle. USB Device: VID: 0x46D PID: 0xAB7 REV: 0x19. Removal action failed: QueryRemovalInitiated. Mostly my Laptop dies going into hibernation docked so I disabled it. It hung and fans are running high through the night before I undersrand the problem.

Hi all, I have this problem below on Intel(R) Dynamic Tuning Technology Updater Component showing exclamation in the Device Manager. USB device draining system power when system is idle. USB Device: VID: 0x5AC PID: 0x12A8 REV

USB devices don't disconnect when put into "sleep" mode, aka USB SUSPEND. They disconnect when internal hubs are turned OFF. Originally the USB tree was not supposed to turn power off ever, but in laptop world even a small drain would cause user

This article will show you how to keep Windows from turning off your USB ports when the system is asleep. If you are having issues with waking your computer back up from sleep it may be that Windows is disabling your USB ports and causing your mouse and keyboard to stop working while asleep.

USB device draining system power when system is idle. USB Device: VID: 0x8087 PID: 0x29 REV: 0x1. Removal action failed: SkippedAsRecentIoObservered. I thought its related to AX200 which VID is present, but getting same message after replacing to old Mediatek. I assume it has nothing to do with BT but the hub itself. Anyone experienced such issue?

USB device draining system power when system is idle. USB Device: VID: 0x8087 PID: 0x29 REV: 0x1 . Removal action failed: SkippedAsRecentIoObservered. This causes quite a high battery drain during sleep. I initially thought it was BT/Wifi card, but after replacing it nothing changed.
